

## IN THE CLAIMS

- 1 (Currently Amended). A method comprising:  
forwarding a software package including instructions to install said software package and together with a list of addressees to a first processor-based system; and  
enabling said first processor-based system to automatically install said package and automatically forward said software package together with at least part of said list of addressees to a second processor-based system, said second processor-based system being on said list of addressees.
- 2 (Original). The method of claim 1 including enabling said first processor-based system to install said software package on said first processor-based system, make a copy of said software package, and transmit said software package to said second processor-based system.
- 3 (Original). The method of claim 2 including causing said first processor-based system to automatically authenticate said software package.
- 4 (Original). The method of claim 3 including causing said second processor-based system to automatically authenticate said software package by sending a message to said first processor-based system.
- 5 (Original). The method of claim 4 including forwarding said software package together with a checksum to enable the second processor-based system to confirm with the first processor-based system that the software package was received correctly.
- 6 (Original). The method of claim 1 including causing said first processor-based system forwards said software package to said second and a third processor-based system.
- 7 (Original). The method of claim 1 including encrypting the software package for transmission between said first and second processor-based systems.

8 (Original). The method of claim 7 including changing the encryption in a known fashion with each successive transfer from one to the next processor-based system.

9 (Original). The method of claim 1 including transferring said software package together with software that enables said second processor-based system to transfer said software package to a third processor-based system.

10 (Original). The method of claim 1 including enabling said first processor-based system to forward said software package to said second processor-based system during a low activity time on said first processor-based system.

11 (Currently Amended). An article comprising a medium storing instructions that, if executed, enable a processor-based system to:

forward a software package, including instructions to install said software package, and together with a list of addressees to a first processor-based system; and

enable said first processor-based system to automatically install said package and automatically forward said software package together with at least part of said list of addressees to a second processor-based system, said second processor-based system being on said list of addressees.

12 (Original). The article of claim 11 further storing instructions that enable the processor-based system to install said software package, make a copy of said software package, and transmit said package to a first processor-based system.

13 (Original). The article of claim 12 further storing instructions that enable the processor-based system to cause said first processor-based system to automatically authenticate said software package.

14 (Original). The article of claim 13 further storing instructions that enable the processor-based system to cause said second processor-based system to automatically authenticate said software package by sending a message to said first processor-based system.

15 (Original). The article of claim 14 further storing instructions that enable said processor-based system to forward said software package together with a checksum to enable the first processor-based system to confirm that the software package was received correctly.

16 (Original). The article of claim 11 further storing instructions that enable the processor-based system to enable said first processor-based system to forward said software package to a second and third processor-based system.

17 (Original). The article of claim 11 further storing instructions that enable the processor-based system to encrypt the software package for transmission.

18 (Original). The article of claim 17 further storing instructions that enable the processor-based system to enable said second processor-based system to change the encryption in a known fashion.

19 (Original). The article of claim 11 further storing instructions that enable the processor-based system to transfer said software package together with software that enables said first processor-based system to transfer said software package to said second processor-based system.

20 (Original). The article of claim 11 further storing instructions that enable the processor-based system to enable said first processor-based system to forward said software package to a second processor-based system during a low activity time on the first processor-based system.

21 (Currently Amended). A system comprising:  
a processor-based device;  
a storage coupled to said processor-based device storing instructions that enable the processor-based device to forward a software package, including instructions to install said software package, and together with a list of addressees to a first processor-based system and enable the first processor-based system to automatically install said package and automatically

forward said software package together with at least part of said list of addressees to a second processor-based system, the second processor-based system being on the list of addressees.

22 (Original). The system of claim 21 wherein said device is a server.

23 (Original). The system of claim 22 wherein said server is a network management server.

24 (Original). The system of claim 21 wherein said device is a client.

25 (Original). The system of claim 21 wherein said storage stores instructions to automatically transfer the software package, the list of addressees, and software to enable further distribution of the software package to additional processor-based systems.

26 (New). The method of claim 1 including enabling said first processor-based system to automatically delete its address from the list of addressees before forwarding said list to said second processor-based system.
